

# **ICP Building Solutions Group**

Version No: 1.6

Safety Data Sheet according to OSHA HazCom Standard (2012) requirements

SECTION 1 IDENTIFICATION

### **Product Identifier**

| Product name  | Concrete Preparer C-37 4520      |
|---|----------------------------------|
| Synonyms  | Not Available                    |
| Proper shipping name                                    | Phosphoric acid solution         |
| Other means of identification                           | Not Available                    |
| Recommended use of the chemical and restrictions on use |                                  |
| Relevant identified uses                                | Preparatory coating for concrete |

## Name, address, and telephone number of the chemical manufacturer, importer, or other responsible party

| Registered company name | ICP Building Solutions Group              |
|-------------------------|---|
| Address                 | 150 Dascomb Road Andover MA United States |
| Telephone               | 978-623-9980                              |
| Fax                     | Not Available                             |
| Website                 | www.icpgroup.com                          |
| Email                   | Not Available                             |

### Emergency phone number

| Association / Organisation        | CHEMTEL      |
|-----------------------------------|--------------|
| Emergency telephone<br>numbers    | 800-255-3924 |
| Other emergency telephone numbers | 813-248-0585 |

# SECTION 2 HAZARD(S) IDENTIFICATION

### Classification of the substance or mixture

### NFPA 704 diamond

Note: The hazard category numbers found in GHS classification in section 2 of this SDSs are NOT to be used to fill in the NFPA 704 diamond. Blue = Health Red = Fire Yellow = Reactivity White = Special (Oxidizer or water reactive substances)

| Classification  | Skin Corrosion/Irritation Category 1B, Chronic Aquatic Hazard Category 2, Metal Corrosion Category 1, Serious Eye Damage Category 1, Acute<br>Toxicity (Oral) Category 4, Acute Aquatic Hazard Category 2 |
|-----------------|---|
| l abal alamanta |   |

# Label elements

| Label ciefficities  |  |
|---------------------|--|
| Hazard pictogram(s) |  |
| SIGNAL WORD         | DANGER   |
| Hazard statement(s) |  |
| H314                | Causes severe skin burns and eye damage.         |
| H411                | Toxic to aquatic life with long lasting effects. |
|                     |  |

H290 May be corrosive to metals.

H302 Harmful if swallowed.

Issue Date: 05/18/2020 Print Date: 05/18/2020 S.GHS.USA.EN

# Hazard(s) not otherwise classified

Not Applicable

## Precautionary statement(s) Prevention

| P260 | Do not breathe mist/vapours/spray.   |
|------|--|
| P280 | Wear protective gloves/protective clothing/eye protection/face protection. |
| P234 | Keep only in original container.   |

## Precautionary statement(s) Response

| P301+P330+P331 | IF SWALLOWED: Rinse mouth. Do NOT induce vomiting.   |
|----------------|--|
| P303+P361+P353 | IF ON SKIN (or hair): Remove/Take off immediately all contaminated clothing. Rinse skin with water/shower.                       |
| P305+P351+P338 | IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. |

# Precautionary statement(s) Storage

 P405
 Store locked up.

# Precautionary statement(s) Disposal

| P501 | Dispose of contents/container to authorised hazardous or special waste collection point in accordance with any local regulation. |
|------|--|
|------|--|

# SECTION 3 COMPOSITION / INFORMATION ON INGREDIENTS

### Substances

See section below for composition of Mixtures

### Mixtures

| CAS No    | %[weight] | Name                    |
|-----------|-----------|-------------------------|
| 7732-18-5 | 64        | water                   |
| 7646-85-7 | 11.4      | zinc chloride. solution |
| 7664-38-2 | 15.22     | phosphoric acid         |

# **SECTION 4 FIRST-AID MEASURES**

## Description of first aid measures

| Eye Contact  | <ul> <li>If this product comes in contact with the eyes:</li> <li>Immediately hold eyelids apart and flush the eye continuously with running water.</li> <li>Ensure complete irrigation of the eye by keeping eyelids apart and away from eye and moving the eyelids by occasionally lifting the upper and lower lids.</li> <li>Continue flushing until advised to stop by the Poisons Information Centre or a doctor, or for at least 15 minutes.</li> <li>Transport to hospital or doctor without delay.</li> <li>Removal of contact lenses after an eye injury should only be undertaken by skilled personnel.</li> </ul>   |
|--------------|--|
| Skin Contact | <ul> <li>If skin or hair contact occurs:</li> <li>Immediately flush body and clothes with large amounts of water, using safety shower if available.</li> <li>Quickly remove all contaminated clothing, including footwear.</li> <li>Wash skin and hair with running water. Continue flushing with water until advised to stop by the Poisons Information Centre.</li> <li>Transport to hospital, or doctor.</li> </ul>   |
| Inhalation   | <ul> <li>If fumes or combustion products are inhaled remove from contaminated area.</li> <li>Lay patient down. Keep warm and rested.</li> <li>Prostheses such as false teeth, which may block airway, should be removed, where possible, prior to initiating first aid procedures.</li> <li>Apply artificial respiration if not breathing, preferably with a demand valve resuscitator, bag-valve mask device, or pocket mask as trained. Perform CPR if necessary.</li> <li>Transport to hospital, or doctor, without delay.</li> <li>Inhalation of vapours or aerosols (mists, fumes) may cause lung oedema.</li> <li>Corrosive substances may cause lung damage (e.g. lung oedema, fluid in the lungs).</li> <li>As this reaction may be delayed up to 24 hours after exposure, affected individuals need complete rest (preferably in semi-recumbent posture) and must be kept under medical observation even if no symptoms are (yet) manifested.</li> <li>Before any such manifestation, the administration of a spray containing a dexamethasone derivative or beclomethasone derivative may be considered.</li> <li>This must definitely be left to a doctor or person authorised by him/her. (ICSC13719)</li> </ul> |
| Ingestion    | <ul> <li>For advice, contact a Poisons Information Centre or a doctor at once.</li> <li>Urgent hospital treatment is likely to be needed.</li> <li>If swallowed do NOT induce vomiting.</li> <li>If vomiting occurs, lean patient forward or place on left side (head-down position, if possible) to maintain open airway and prevent aspiration.</li> <li>Observe the patient carefully.</li> <li>Never give liquid to a person showing signs of being sleepy or with reduced awareness; i.e. becoming unconscious.</li> <li>Give water to rinse out mouth, then provide liquid slowly and as much as casualty can comfortably drink.</li> <li>Transport to hospital or doctor without delay.</li> </ul>  |

Continued...

# Concrete Preparer C-37 4520

See Section 11

# Indication of any immediate medical attention and special treatment needed

for phosphate salts intoxication:

- All treatments should be based on observed signs and symptoms of distress in the patient. Consideration should be given to the possibility that overexposure to materials other than this product may have occurred.
- Ingestion of large quantities of phosphate salts (over 1.0 grams for an adult) may cause an osmotic catharsis resulting in diarrhoea and probable abdominal cramps. Larger doses such as 4-8 grams will almost certainly cause these effects in everyone. In healthy individuals most of the ingested salt will be excreted in the faeces with the diarrhoea and, thus, not cause any systemic toxicity. Doses greater than 10 grams hypothetically may cause systemic toxicity.
- Treatment should take into consideration both anionic and cation portion of the molecule.
- All phosphate salts, except calcium salts, have a hypothetical risk of hypocalcaemia, so calcium levels should be monitored.

### Treat symptomatically.

For acute or short term repeated exposures to strong acids:

- Airway problems may arise from laryngeal edema and inhalation exposure. Treat with 100% oxygen initially.
- ▶ Respiratory distress may require cricothyroidotomy if endotracheal intubation is contraindicated by excessive swelling
- ▶ Intravenous lines should be established immediately in all cases where there is evidence of circulatory compromise.
- ▶ Strong acids produce a coagulation necrosis characterised by formation of a coagulum (eschar) as a result of the dessicating action of the acid on proteins in specific tissues. INGESTION:
- Immediate dilution (milk or water) within 30 minutes post ingestion is recommended.
- DO NOT attempt to neutralise the acid since exothermic reaction may extend the corrosive injury.
- Be careful to avoid further vomit since re-exposure of the mucosa to the acid is harmful. Limit fluids to one or two glasses in an adult.
- Charcoal has no place in acid management.
- Some authors suggest the use of lavage within 1 hour of ingestion.

### SKIN:

EYE:

Skin lesions require copious saline irrigation. Treat chemical burns as thermal burns with non-adherent gauze and wrapping.

Deep second-degree burns may benefit from topical silver sulfadiazine.

Eye injuries require retraction of the eyelids to ensure thorough irrigation of the conjuctival cul-de-sacs. Irrigation should last at least 20-30 minutes. DO NOT use neutralising agents or any other additives. Several litres of saline are required.

Cycloplegic drops, (1% cyclopentolate for short-term use or 5% homatropine for longer term use) antibiotic drops, vasoconstrictive agents or artificial tears may be indicated dependent on the severity of the injury.

Steroid eye drops should only be administered with the approval of a consulting ophthalmologist).

[Ellenhorn and Barceloux: Medical Toxicology]

# SECTION 5 FIRE-FIGHTING MEASURES

### Extinguishing media

- Water spray or fog.
- Foam.
- Dry chemical powder.

### Special hazards arising from the substrate or mixture

| Fire Incompatibility  | None known.  |  |
|---|--|--|
| Special protective equipment and precautions for fire-fighters  |  |  |
| <ul> <li>Fire Fighting</li> <li>Alert Fire Brigade and tell them location and nature of hazard.</li> <li>Wear full body protective clothing with breathing apparatus.</li> <li>Prevent, by any means available, spillage from entering drains or water course.</li> </ul> |  |  |
| Fire/Explosion Hazard   | <ul> <li>Non combustible.</li> <li>Not considered to be a significant fire risk.</li> <li>Acids may react with metals to produce hydrogen, a highly flammable and explosive gas.</li> <li>Decomposition may produce toxic fumes of:<br/>hydrogen chloride<br/>phosphorus oxides (POx)</li> </ul> |  |

### SECTION 6 ACCIDENTAL RELEASE MEASURES

### Personal precautions, protective equipment and emergency procedures

See section 8

### Environmental precautions

See section 12

### Methods and material for containment and cleaning up

| Minor Spills | <ul> <li>Environmental hazard - contain spillage.</li> <li>Drains for storage or use areas should have retention basins for pH adjustments and dilution of spills before discharge or disposal of material.</li> <li>Check regularly for spills and leaks.</li> <li>Clean up all spills immediately.</li> <li>Avoid breathing vapours and contact with skin and eyes.</li> <li>Control personal contact with the substance, by using protective equipment.</li> </ul> |
|--------------|---|
| Major Spills | Environmental hazard - contain spillage.  |

Personal Protective Equipment advice is contained in Section 8 of the SDS.

# SECTION 7 HANDLING AND STORAGE

| Precautions for safe handling   |   |
|---------------------------------|---|
| Safe handling                   | <ul> <li>Avoid all personal contact, including inhalation.</li> <li>Wear protective clothing when risk of exposure occurs.</li> <li>Use in a well-ventilated area.</li> <li>DO NOT allow clothing wet with material to stay in contact with skin</li> </ul>   |
| Other information               | <ul> <li>Store in original containers.</li> <li>Keep containers securely sealed.</li> <li>Store in a cool, dry, well-ventilated area.</li> </ul>  |
| Conditions for safe storage, in | cluding any incompatibilities   |
| Suitable container              | <ul> <li>DO NOT use aluminium or galvanised containers</li> <li>Check regularly for spills and leaks</li> <li>Lined metal can, lined metal pail/ can.</li> <li>Plastic pail.</li> <li>Polyliner drum.</li> <li>For low viscosity materials</li> <li>Drums and jerricans must be of the non-removable head type.</li> <li>Where a can is to be used as an inner package, the can must have a screwed enclosure.</li> <li>For materials with a viscosity of at least 2680 cSt.</li> </ul>   |
| Storage incompatibility         | <ul> <li>Phosphoric acid: <ul> <li>is a medium-strong acid which produces violent reaction with bases</li> <li>may produce violent react when water is added to the concentrated form</li> <li>reacts violently with solutions containing ammonia or bleach, azo compounds, epoxides and other polymerisable compounds</li> <li>reacts, possibly violently with amines, aldehydes, alkanolamines, alcohols, alkylene oxides, ammonia, ammonia hydroxide, calcium oxide, cyanides, epichlorohydrin, esters, halogenated organics, isocyanates, ketones, oleum, organic anhydrides, sodium tetraborate, sulfides, sulfuric acid, strong oxidisers, vinyl acetate</li> <li>forms explosive mixtures with nitromethane</li> <li>at elevated temperatures attacks many metals producing hydrogen gas</li> <li>at room temperature does not attack stainless steel, copper or its alloys</li> <li>attacks glass, ceramics, and some plastics, rubber and coatings</li> </ul> </li> <li>Zinc chloride: <ul> <li>reacts violently with strong bases, potassium</li> <li>attacks metals as fume or in the presence of moisture.</li> <li>Inorganic acids neutralise chemical bases (for example: amines and inorganic hydroxides) to form salts - neutralisation can generate dangerously large amounts of heat in small spaces.</li> </ul> </li> <li>WARNING: Avoid or control reaction with peroxides. All <i>transition metal</i> peroxides should be considered as potentially explosive. For example transition metal complexes of alkyl hydroperoxides may decompose explosively.</li> <li>Reacts vigorously with alkalis</li> <li>Reacts with mild steel, galvanised steel / zinc producing hydrogen gas which may form an explosive mixture with air.</li> </ul> |

# SECTION 8 EXPOSURE CONTROLS / PERSONAL PROTECTION

# **Control parameters**

# OCCUPATIONAL EXPOSURE LIMITS (OEL)

| INGREDIENT | DATA |
|------------|------|
|            |      |

| Source   | Ingredient              | Material name   | TWA        | STEL             | Peak             | Notes                   |
|--|-------------------------|---|------------|------------------|------------------|-------------------------|

# EMERGENCY LIMITS

| Ingredient              | Material name   | TEEL-1        | TEEL-2        | TEEL-3        |
|-------------------------|-----------------|---------------|---------------|---------------|
| zinc chloride, solution | Zinc chloride   | 2 mg/m3       | 800 mg/m3     | 4,800 mg/m3   |
| phosphoric acid         | Phosphoric acid | Not Available | Not Available | Not Available |

| Ingredient              | Original IDLH | Revised IDLH  |
|-------------------------|---------------|---------------|
| water                   | Not Available | Not Available |
| zinc chloride, solution | 50 mg/m3      | Not Available |
| phosphoric acid         | 1,000 mg/m3   | Not Available |

# Exposure controls

| Appropriate engineering<br>controls | Engineering controls are used to remove a hazard or place a barrier between the worker and the hazard. Well-designed engineering controls can be highly effective in protecting workers and will typically be independent of worker interactions to provide this high level of protection. The basic types of engineering controls are:<br>Process controls which involve changing the way a job activity or process is done to reduce the risk.  |
|-------------------------------------|---|
| Personal protection                 |   |
| Eye and face protection             | <ul> <li>Safety glasses with unperforated side shields may be used where continuous eye protection is desirable, as in laboratories; spectacles are not sufficient where complete eye protection is needed such as when handling bulk-quantities, where there is a danger of splashing, or if the material may be under pressure.</li> <li>Chemical goggles.whenever there is a danger of the material coming in contact with the eyes; goggles must be properly fitted.</li> <li>Full face shield (20 cm, 8 in minimum) may be required for supplementary but never for primary protection of eyes; these afford face protection.</li> </ul>   |
| Skin protection                     | See Hand protection below   |
| Hands/feet protection               | <ul> <li>Elbow length PVC gloves</li> <li>When handling corrosive liquids, wear trousers or overalls outside of boots, to avoid spills entering boots.</li> <li>The selection of suitable gloves does not only depend on the material, but also on further marks of quality which vary from manufacturer to manufacturer. Where the chemical is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.</li> <li>The exact break through time for substances has to be obtained from the manufacturer of the protective gloves and has to be observed when making a final choice.</li> </ul> |
| Body protection                     | See Other protection below  |
| Other protection                    | <ul> <li>Overalls.</li> <li>PVC Apron.</li> <li>PVC protective suit may be required if exposure severe.</li> </ul>  |

### **Respiratory protection**

Type B-P Filter of sufficient capacity. (AS/NZS 1716 & 1715, EN 143:2000 & 149:2001, ANSI Z88 or national equivalent)

# SECTION 9 PHYSICAL AND CHEMICAL PROPERTIES

## Information on basic physical and chemical properties

| Appearance                                   | Not Available |  |               |
|--|---------------|--|---------------|
| Physical state                               | Liquid        | Relative density (Water = 1)               | Not Available |
| Odour  | Not Available | Partition coefficient n-octanol<br>/ water | Not Available |
| Odour threshold                              | Not Available | Auto-ignition temperature (°C)             | Not Available |
| pH (as supplied)                             | Not Available | Decomposition temperature                  | Not Available |
| Melting point / freezing point<br>(°C)       | Not Available | Viscosity (cSt)                            | Not Available |
| Initial boiling point and boiling range (°C) | Not Available | Molecular weight (g/mol)                   | Not Available |
| Flash point (°C)                             | Not Available | Taste                                      | Not Available |

# SECTION 11 TOXICOLOGICAL INFORMATION

# Information on toxicological effects

| Inhaled      | There is strong evidence to suggest that this material can cause, if inhaled once, very serious, irreversible damage of organs.<br>The material can cause respiratory irritation in some persons. The body's response to such irritation can cause further lung damage.<br>Corrosive acids can cause irritation of the respiratory tract, with coughing, choking and mucous membrane damage. There may be dizziness,<br>headache, nausea and weakness.<br>Not normally a hazard due to non-volatile nature of product<br>Hydrogen chloride (HCI) vapour or fumes present a hazard from a single acute exposure. Exposures of 1300 to 2000 ppm have been lethal to<br>humans in a few minutes.<br>Inhalation of HCI may cause choking, coughing, burning sensation and may cause ulceration of the nose, throat and larynx.<br>Inhalation of aerosols (mists, fumes), generated by the material during the course of normal handling, may produce severely toxic effects.<br>Relatively small amounts absorbed from the lungs may prove fatal.  |
|--------------|--|
| Ingestion    | There is strong evidence to suggest that this material can cause, if swallowed once, very serious, irreversible damage of organs.<br>Ingestion of acidic corrosives may produce burns around and in the mouth, the throat and oesophagus. Immediate pain and difficulties in<br>swallowing and speaking may also be evident.<br>The material is not thought to produce adverse health effects following ingestion (as classified by EC Directives using animal models).<br>Nevertheless, adverse systemic effects have been produced following exposure of animals by at least one other route and good hygiene practice<br>requires that exposure be kept to a minimum.<br>Ingesting large amounts of phosphoric acid may cause severe abdominal pain, thirst, acidaemia (excessive acid in the blood), breathing<br>difficulties, convulsions, collapse, shock and death. It also has a corrosive effect if swallowed.   |
| Skin Contact | Skin contact with the material may produce toxic effects; systemic effects may result following absorption.<br>There is strong evidence to suggest that this material, on a single contact with skin, can cause very serious, irreversible damage of organs.<br>Skin contact with acidic corrosives may result in pain and burns; these may be deep with distinct edges and may heal slowly with the formation of<br>scar tissue.<br>Open cuts, abraded or irritated skin should not be exposed to this material<br>Entry into the blood-stream, through, for example, cuts, abrasions or lesions, may produce systemic injury with harmful effects. Examine the skin<br>prior to the use of the material and ensure that any external damage is suitably protected.   |
| Eye          | Direct eye contact with acid corrosives may produce pain, tears, sensitivity to light and burns. Mild burns of the epithelia generally recover rapidly and completely.<br>If applied to the eyes, this material causes severe eye damage.<br>Irritation of the eyes may produce a heavy secretion of tears (lachrymation).   |
| Chronic      | Repeated or prolonged exposure to acids may result in the erosion of teeth, swelling and/or ulceration of mouth lining. Irritation of airways to lung, with cough, and inflammation of lung tissue often occurs.<br>Long-term exposure to respiratory irritants may result in airways disease, involving difficulty breathing and related whole-body problems. Strong evidence exists that this substance may cause irreversible mutations (though not lethal) even following a single exposure.<br>Ample evidence from experiments exists that there is a suspicion this material directly reduces fertility.<br>Substance accumulation, in the human body, may occur and may cause some concern following repeated or long-term occupational exposure.<br>Chronic minor exposure to hydrogen chloride (HCI) vapour or fume may cause discolouration or erosion of the teeth, bleeding of the nose and<br>gums; and ulceration of the mucous membranes of the nose. Workers exposed to hydrochloric acid suffered from stomach inflammation and a<br>number of cases of chronic bronchitis (airway inflammation) have also been reported. Repeated or prolonged exposure to dilute solutions of<br>hydrogen chloride may cause skin inflammation.<br>Welding or flame cutting of metals with zinc or zinc dust coatings may result in inhalation of zinc oxide fume; high concentrations of zinc oxide<br>fume may result in "metal fume fever"; also known as "brass chills", an industrial disease of short duration. [I.L.O] Symptoms include malaise,<br>fever, weakness, nausea and may appear quickly if operations occur in enclosed or poorly ventilated areas. |

end: Extracted from 1. IUCLID Toxicity Data 2. Europe ECHA Registered Substances - Ecotoxicological Information - Aquatic Toxicity 3. EPIWIN Suite V3.12 (QSAR) - Aquatic Toxicity Data (Estimated) 4. US EPA, Ecotox database - Aquatic Toxicity Data 5. ECETOC Aquatic Hazard Assessment Data 6. NITE (Japan) - Bioconcentration Data 7. METI (Japan) - Bioconcentration Data 8. Vendor Data

On the basis of available evidence concerning either toxicity, persistence, potential to accumulate and or observed environmental fate and behaviour, the material may present a danger, immediate or long-term and /or delayed, to the structure and/ or functioning of natural ecosystems.

Toxic to aquatic organisms, may cause long-term adverse effects in the aquatic environment.

Do NOT allow product to come in contact with surface waters or to intertidal areas below the mean high water mark. Do not contaminate water when cleaning equipment or disposing of equipment wash-waters.

Wastes resulting from use of the product must be disposed of on site or at approved waste sites.

Ecotoxicity:

The tolerance of water organisms towards pH margin and variation is diverse. Recommended pH values for test species listed in OECD guidelines are between 6.0 and almost 9. Acute testing with fish showed 96h-LC50 at about pH 3.5

For Chloride: Although inorganic chloride ions are not normally considered toxic they can exist in effluents at acutely toxic levels. Incidental exposure to inorganic chloride may occur in occupational settings where chemicals management policies are improperly applied. The toxicity of chloride salts depends on the counter-ion (cation) present; that of chloride itself is unknown.

For Phosphate: The principal problems of phosphate contamination of the environment relates to eutrophication processes in lakes and ponds. Phosphorus is an essential plant nutrient and is usually the limiting nutrient for blue-green algae.

Aquatic Fate: Lakes overloaded with phosphates is the primary catalyst for the rapid growth of algae in surface waters. For Zinc and its Compounds: BCF: 4 to 24,000.

Environmental Fate: Zinc is capable of forming complexes with a variety of organic and inorganic groups and is an essential nutrient present in all organisms.

Atmospheric Fate: Zinc concentrations in the air are relatively low, except near industrial sources, such as smelters.

Prevent, by any means available, spillage from entering drains or water courses.

DO NOT discharge into sewer or waterways.

# Persistence and degradability

| Ingredient              | Persistence: Water/Soil | Persistence: Air |
|-------------------------|-------------------------|------------------|
| water                   | LOW                     | LOW              |
| zinc chloride, solution | HIGH                    | HIGH             |
| phosphoric acid         | HIGH                    | HIGH             |

## **Bioaccumulative potential**

| Ingredient              | Bioaccumulation        |
|-------------------------|------------------------|
| water                   | LOW (LogKOW = -1.38)   |
| zinc chloride, solution | HIGH (BCF = 16000)     |
| phosphoric acid         | LOW (LogKOW = -0.7699) |

## Mobility in soil

| Ingredient              | Mobility          |
|-------------------------|-------------------|
| water                   | LOW (KOC = 14.3)  |
| zinc chloride, solution | LOW (KOC = 23.74) |
| phosphoric acid         | HIGH (KOC = 1)    |

# SECTION 13 DISPOSAL CONSIDERATIONS

### Waste treatment methods

| Product / Packaging disposal | <ul> <li>Containers may still present a chemical hazard/ danger when empty.</li> <li>Return to supplier for reuse/ recycling if possible.</li> <li>Otherwise:</li> <li>If container can not be cleaned sufficiently well to ensure that residuals do not remain or if the container cannot be used to store the same product, then puncture containers, to prevent re-use, and bury at an authorised landfill.</li> <li>Legislation addressing waste disposal requirements may differ by country, state and/ or territory. Each user must refer to laws operating in their area. In some areas, certain wastes must be tracked.</li> <li>DO NOT allow wash water from cleaning or process equipment to enter drains.</li> <li>It may be necessary to collect all wash water for treatment before disposal.</li> <li>In all cases disposal to sever may be subject to local laws and regulations and these should be considered first.</li> <li>Recycle wherever possible.</li> <li>Consult manufacturer for recycling options or consult local or regional waste management authority for disposal if no suitable treatment or disposal facility can be identified.</li> <li>Treat and neutralise at an approved treatment plant.</li> </ul> |

### Other information

Classification of the preparation and its individual components has drawn on official and authoritative sources as well as independent review by the Chemwatch Classification committee using available literature references.

The SDS is a Hazard Communication tool and should be used to assist in the Risk Assessment. Many factors determine whether the reported Hazards are Risks in the workplace or other settings. Risks may be determined by reference to Exposures Scenarios.
